Lagos, NG

Professional Summary

Backend Engineer with 3+ years of experience designing and building scalable, low-latency microservices and distributed systems. Expertise in API architecture, database optimization, event-driven processing, and infrastructure automation for fintech applications.

Skills

- **Languages**: Rust, TypeScript, JavaScript, SQL, Python
- **Frameworks**: Fastify, Node.js, Express, Redis, RabbitMQ
- **Databases**: PostgreSQL, MongoDB, TimescaleDB
- **Infrastructure**: Kubernetes, Docker, CI/CD, AWS, Linux
- **Tools**: Git, Sentry, Winston, Bull Queues

Experience

Backend Engineer *Oct 2024 - Present*
Taja *Lagos, NG*

- **Abuse Detection**: Implemented device fingerprinting and abuse-detection controls to identify impersonation attempts, reducing account takeover incidents by 30%.
- **Query & Database Design**: Optimized SQL queries, database indexes, and schema design to cut average request latency by 20% while improving data integrity across core fintech features.
- **Third-Party Integrations**: Integrated external APIs for payments and identity verification, building provider-agnostic abstraction with automatic failover that routes requests to backup providers when any single service fails, ensuring uninterrupted uptime.
- **Admin Dashboard**: Developed an admin dashboard for internal operations workflows, helping increase organizational productivity by 50% through faster task handling and reporting.

Software Engineer (contract) *Oct 2025 - May 2026*
Kite *Lagos, NG*

- **Unified API Layer**: Architected a unified API layer around major payment providers, consolidating complex financial rails into a single high-performance interface used by multiple client applications.
- **Team Leadership**: Led a team of 2 engineers, defining the technical roadmap, code-review standards, and quarterly planning process while maintaining 99.9% system uptime.
- **Regression Testing**: Introduced automated regression testing across critical payment flows, cutting production bug escapes by over 50% in the first quarter.
- **Event-Driven Processing**: Implemented event-driven background processing via RabbitMQ consumers and Bull queues for async email delivery, virtual account creation, and scheduled exchange rate updates.

Software Engineer *May 2023 - Nov 2024*
LocalRamp *Lagos, NG*

- **Fiat-to-Crypto Gateway**: Led end-to-end development of a fiat-to-crypto gateway processing millions in monthly transaction volume, with PCI-DSS compliance and KYC/AML integration.
- **Analytics Dashboard**: Built a real-time analytics dashboard for operations teams and an embeddable widget adopted by 300+ enterprise clients, contributing to an 18% improvement in retention.
- **CI/CD Optimization**: Reduced CI/CD pipeline duration by 70% by streamlining build and deployment stages, and authored API design standards that cut new engineer onboarding time by 40%.

Projects

RateLimitr (TypeScript, Fastify, Redis, TimescaleDB) *2024*

- Distributed multi-tenant rate-limiting service handling 10,000+ RPS across 50+ nodes using atomic Redis Lua operations. Features real-time analytics via TimescaleDB.

Synapse (TypeScript, Express, MongoDB, Redis)

- Multi-tenant payment API unifying 3 providers behind a single adapter interface — virtual accounts, cards, KYC/KYB, and cross-border payouts across 6+ financial services. Secured with JWT/API-key auth, rate limiting, structured logging, and Sentry.

Education

Alex Ekwuememe Federal University, Ebonyi State, Abakaliki Ebonyi, Nigeria
Bachelor of Science - Computer Science; GPA: 3.5 *Jan 2021 - Oct 2025*

- **Courses**: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases
