Professional Summary

Full-Stack Engineer with 3+ years building and operating end-to-end web applications, from responsive React front ends to containerized backend services. Experienced in microservices and event-driven architecture, Docker and Kubernetes deployments, CI/CD, and production observability. Comfortable owning features from concept to production, joining on-call incident response, and improving performance and reliability in fast-paced, team-oriented environments. Background in payments and digital commerce systems.

Skills

- **Languages**: TypeScript, JavaScript, Go, Python, SQL, Bash
- **Frontend**: React, Next.js, Redux, TanStack Query, Tailwind CSS, HTML5, CSS3, Responsive Design, Accessibility
- **Backend**: Go, Node.js, Express.js, Fastify, Microservices, Event-Driven Architecture, REST APIs, GraphQL
- **Infrastructure**: Docker, Kubernetes, CI/CD, AWS, GCP, Azure, Linux, Git/GitHub
- **Data & Messaging**: PostgreSQL, MySQL, ClickHouse, MongoDB, Redis, Kafka, Message Queues
- **Observability**: Prometheus, Grafana, Datadog, Sentry, Log Analysis, Distributed Tracing, Performance Optimization

Experience

Full Stack Developer *Oct 2024 - Present*
Taja *Lagos, NG*

- **Full-Stack Feature Delivery**: Built and shipped features end to end across React front ends and Go/Node.js microservices, owning work from concept through production and post-release support.
- **Microservices & Events**: Developed event-driven services with message queues and provider-agnostic integrations, adding automatic failover so live workloads stay reliable when a dependency degrades.
- **Containers & CI/CD**: Containerized services with Docker, deployed to Kubernetes, and maintained CI/CD pipelines and automated tests for quality, repeatable releases.
- **Observability & On-Call**: Monitored and debugged production code with distributed logging, metrics, and alerting (Grafana, Sentry), participating in incident response and cutting mean time to resolution.
- **Performance & Code Review**: Optimized SQL queries, indexes, and service paths to cut average request latency by 20%, and contributed to code reviews and technical discussions across teams.

Software Engineer (Contract) *Oct 2025 - May 2026*
Kite *Lagos, NG*

- **Architecture & APIs**: Architected a unified API layer consolidating multiple payment providers into one interface used by several client applications, with event-based communication between services.
- **Reliability & Performance**: Improved reliability to 99.9% uptime and reduced repeat production incidents by over 50% through systematic investigation and automated regression checks.
- **Cross-Functional Delivery**: Collaborated with product, design, and QA to deliver features end to end, and documented architecture decisions and operational runbooks for the team.

Software Engineer *May 2023 - Nov 2024*
LocalRamp *Lagos, NG*

- **Payments Platform**: Led end-to-end development of a payments and digital commerce platform handling millions in monthly volume, from architecture through deployment and support.
- **Containerization & Cloud**: Deployed containerized services on AWS and GCP with Docker and CI/CD, using GCP Cloud Logging and monitoring dashboards to debug production behavior.
- **Database & Optimization**: Designed relational schemas and tuned MySQL/PostgreSQL queries, improving response times by 20% on high-traffic workloads.
- **Standards & Process**: Reduced CI/CD pipeline duration by 20% and authored API design standards that cut new engineer onboarding time by 40%.

Projects

RateLimitr (TypeScript, Fastify, Redis, TimescaleDB) *2024*

- Distributed multi-tenant rate-limiting service handling 10,000+ RPS across 50+ nodes using atomic Redis Lua operations, with real-time analytics and an LLM-powered assistant over live usage data.

Synapse (TypeScript, Express, MongoDB, Redis) *2025*

- Multi-tenant payments API integrating 3+ providers via an adapter pattern for virtual accounts, KYC, and cross-border payouts. Secured with JWT, rate limiting, and structured logging.

Education

Alex Ekwueme Federal University, Ebonyi State, Abakaliki Ebonyi, Nigeria
Bachelor of Science - Computer Science; GPA: 3.5

- **Courses**: Operating Systems, Data Structures, Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases
