Dear Hiring Manager,

I am writing to apply for the Tailwind Front-end Developer role. Migrating an enterprise application from Bootstrap to Tailwind, component by component while keeping the product shipping, is exactly the kind of work I enjoy. I have over three years building enterprise-grade React and TypeScript interfaces in Tailwind CSS, and I would be glad to help Dotsub modernize its front end and then keep improving it iteratively.

At Taja, I built and maintained a Tailwind component system with variant-driven, reusable UI primitives, standardizing spacing, typography, and color tokens across a B2B platform. I also refactored legacy Bootstrap-based screens into clean React/TypeScript components with Tailwind utilities, which is a close match for the migration you are planning. I work directly with product to review existing screens, question outdated patterns, and ship incremental UX improvements to dashboards, data-heavy tables, and multi-step forms – so I am comfortable forming opinions about existing UI and proposing concrete, use-case-driven alternatives.

At Kite, I translated complex financial data flows into responsive, accessible interfaces with Tailwind, and built a shared component library with consistent design tokens and states that reduced duplicate styling. At LocalRamp, I led frontend development of a high-volume payments platform used by 300+ enterprise clients, owning its visual design and component standards. I also designed and built a real-time analytics dashboard adopted by those clients, and brought onboarding and payment flows to WCAG 2.2 AA compliance.

On logistics: I am available full-time for the duration of the project, can start within two weeks, and can overlap several hours with US Eastern time daily. My portfolio and work samples are available at github.com/iyanubruce, and I am happy to walk through which designs I built independently versus collaboratively, along with my hourly rate and weekly availability.

I would welcome the chance to discuss how I can help Dotsub replace its Bootstrap front end with a clean, maintainable Tailwind system.

Sincerely,
Iyanuoluwa I. Taiwo
