Dear Hiring Manager,

I am writing to express my interest in the Frontend Engineer position. With three years of experience building responsive, high-performance interfaces with TypeScript, React, and Next.js, I have shipped products that directly improved how users and enterprise clients interact with fintech platforms.

At LocalRamp, I led the frontend development of a high-volume, PCI-DSS-compliant fiat-to-crypto gateway, translating complex financial data flows into responsive UI components. I built a real-time analytics dashboard for operations teams and an embeddable widget adopted by 300+ enterprise clients, contributing to an 18% improvement in retention. I also collaborated with UX designers to improve interface layouts, increasing user adoption by 12%.

At Kite, I co-developed a cross-platform mobile frontend, implementing state management and real-time synchronization with a unified backend API. At Taja, I work closely with the frontend team to define data contracts that reduced client-side data fetching by 20%. On the side, I led the frontend architecture for RateLimitr, a rate-limiting platform that delivers real-time security analytics to over 10,000 concurrent tenants.

I write clean, typed code in TypeScript and React, optimize for performance, and care deeply about user experience and accessibility. Testing with Jest, Vitest, and React Testing Library is part of my workflow. I would welcome the opportunity to discuss how I can contribute to your team. Thank you for your time and consideration.

Sincerely,
Iyanuoluwa I. Taiwo
