Dear Hiring Manager,

I am writing to express my interest in the Full-Stack Engineer position. With three years of experience building fintech products across the entire stack, I have shipped everything from responsive React and Next.js frontends to APIs, payment integrations, and database structures that handle millions in monthly transaction volume.

On the frontend, I led development of a high-volume, PCI-DSS-compliant fiat-to-crypto gateway at LocalRamp, built a real-time analytics dashboard and embeddable widget adopted by 300+ enterprise clients, and co-developed a cross-platform mobile frontend at Kite with real-time state synchronization. On the backend, I designed and maintained RESTful APIs, integrated external payment and identity-verification providers with automatic failover, and optimized SQL queries and database structures that improved response times by 20%.

I work across the stack daily with TypeScript, React, Node.js, PostgreSQL, MongoDB, and Redis, and I own infrastructure concerns like Docker, Kubernetes, and CI/CD. At LocalRamp I reduced CI/CD pipeline duration by 70% by streamlining build and deployment stages. I care about clean data contracts, testable code, and seamless handoffs between API and UI.

I would welcome the opportunity to discuss how my full-stack experience can contribute to your team. Thank you for your time and consideration.

Sincerely,
Iyanuoluwa I. Taiwo
