Professional Summary

Technical Support Engineer with 3+ years resolving complex customer issues in demanding B2B development environments. First point of contact for customer requests, driving investigations from qualification to resolution while managing customer relationships and SLA commitments. Strong across the DevOps toolchain – Git/SVN, CI/CD (Jenkins, Azure DevOps, BitBucket, GitLab), and IDE-based developer workflows – with hands-on experience in system-wide deployments, log analysis, and reproducing issues in their full context. Salesforce platform exposure and a customer-service-first approach.

Skills Summary

- **Support**: Customer Support, SLA Management, Incident Triage, Escalation, Root-Cause Analysis, Knowledge Base Authoring, 24x7 Coverage
- **DevOps Toolchain**: SCM (Git, SVN, BitBucket, GitLab), CI/CD (Jenkins, Azure DevOps), Docker, Kubernetes, Release & Deployment Pipelines
- **Platforms**: Salesforce (Cases, Basic Administration/Configuration), Linux, Windows, Cloud Deployments
- **Diagnostics**: Log Analysis, Error Tracing, System-Wide Deployment Troubleshooting, Network/Server/Database Isolation, Reproduction Steps
- **Languages**: TypeScript, JavaScript, SQL, Bash, Python
- **Data & Tools**: PostgreSQL, MySQL, MongoDB, Redis, Postman, Sentry, Grafana, Jira, Confluence

Experience

Backend Engineer *Oct 2024 - Present*
Taja *Lagos, NG*

- **First Point of Contact & Resolution**: Served as first contact for enterprise customer and partner support requests, qualifying concerns and driving technical investigations through to resolution.
- **DevOps & Pipeline Support**: Maintained Git/GitHub and SVN workflows, CI/CD pipelines, and containerized service deployments across Linux and Windows environments, troubleshooting build and release failures.
- **System-Wide Investigation**: Diagnosed issues spanning application, network, server, and database layers, reproducing customer scenarios and confirming fixes against production data.
- **Cross-Team Collaboration**: Coordinated with engineering, product, and success teams to resolve issues and improve customer experience, keeping clients updated on all open requests.
- **Log Analysis & Escalation**: Investigated production issues with application and cloud logs, tracing errors across services and escalating with detailed root-cause documentation that reduced repeat tickets.

Software Engineer (Contract) *Oct 2025 - May 2026*
Kite *Lagos, NG*

- **Customer Troubleshooting**: Debugged application and integration issues reported by customers, investigating configuration, synchronization, and deployment problems against backend services.
- **Deployments & Reliability**: Supported releases and production deployments, improving reliability to 99.9% uptime and reducing repeat incidents by over 50% through systematic investigation.
- **Collaboration & Documentation**: Worked with support, QA, and operations teams globally and authored troubleshooting and operational runbook documentation.

Technical Support / Software Engineer *May 2023 - Nov 2024*
LocalRamp *Lagos, NG*

- **Customer Support at Scale**: Provided end-to-end technical support for 300+ enterprise customers, investigating reported computing, configuration, and integration issues and resolving or escalating appropriately.
- **SLA & Triage**: Ran a structured triage and escalation workflow that prioritized issues by severity and cut average resolution time from 48 hours to under 12 hours.
- **System & Deployment Troubleshooting**: Isolated issues across application, network, server, and database layers, using GCP Cloud Logging and monitoring to trace errors and confirm fixes against live traffic.
- **Knowledge Base**: Authored troubleshooting guides and documentation that cut customer onboarding time by 40% and recurring ticket volume by 25%.

Education

Alex Ekwueme Federal University, Ebonyi State, Abakaliki Ebonyi, Nigeria
Bachelor of Science - Computer Science; GPA: 3.5
