Lagos, NG

Professional Summary

Backend Engineer with 2 years of experience designing and building scalable, low-latency microservices and distributed systems. Expertise in API architecture, database optimization, event-driven processing, and infrastructure automation for fintech and blockchain applications.

Skills

- **Languages**: Rust, TypeScript, JavaScript, SQL
- **Frameworks**: Fastify, Node.js, Express, Redis, RabbitMQ, GraphQL
- **Databases**: PostgreSQL, MongoDB, TimescaleDB
- **Infrastructure**: Kubernetes, Docker, CI/CD, AWS, Serverless, Linux
- **Tools**: Git, Sentry, Winston, Bull Queues
- **AI & ML**: LLM APIs, Prompt Engineering, Natural-Language Interfaces, Agentic Workflows
- **Developer Tooling**: SDK & CLI Development, OpenAPI/Swagger

Experience

Backend Engineer *Nov 2024 - Present*
Taja *Lagos, NG*

- **Abuse Detection**: Implemented device fingerprinting and abuse-detection controls to identify impersonation attempts, reducing account takeover incidents by 30%.
- **Query & Database Design**: Optimized SQL queries, database indexes, and schema design to cut average request latency by 20% while improving data integrity across core fintech features.
- **Third-Party Integrations**: Integrated external APIs for payments and identity verification, building provider-agnostic abstraction with automatic failover that routes requests to backup providers when any single service fails, ensuring uninterrupted uptime.
- **Admin Dashboard**: Developed an admin dashboard for internal operations workflows, helping increase organizational productivity by 50% through faster task handling and reporting.

Software Engineer (contract) *Oct 2025 - May 2026*
Kite *Lagos, NG*

- **Unified API Layer**: Architected a unified API layer around major payment providers, consolidating complex financial rails into a single high-performance interface used by multiple client applications.
- **Team Leadership**: Led a team of 2 engineers, defining the technical roadmap, code-review standards, and quarterly planning process while maintaining 99.9% system uptime.
- **Regression Testing**: Introduced automated regression testing across critical payment flows, cutting production bug escapes by over 50% in the first quarter.
- **Event-Driven Processing**: Implemented event-driven background processing via RabbitMQ consumers and Bull queues for async email delivery, virtual account creation, and scheduled exchange rate updates.

Projects

RateLimitr (TypeScript, Fastify, Redis, TimescaleDB) *2024*

- Distributed multi-tenant rate-limiting service handling 10,000+ RPS across 50+ nodes using atomic Redis Lua operations. Features real-time analytics via TimescaleDB.

Synapse (TypeScript, Express, MongoDB, Redis) *2025*

- Multi-tenant payment API unifying 3 providers behind a single adapter interface — virtual accounts, cards, KYC/KYB, and cross-border payouts across 6+ financial services. Secured with JWT/API-key auth, rate limiting, structured logging, and Sentry.

Education

Alex Ekwuememe Federal University, Ebonyi State, Abakaliki Ebonyi, Nigeria
Bachelor of Science - Computer Science; GPA: 3.5 *Jan 2021 - Oct 2025*

- **Courses**: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

Certifications

- **HackerRank**: Software Engineer • Oct 2026 • Credential ID: AE666AC16F1C • verify
