Dear Hiring Manager,

I am writing to express my interest in the B2B technical support role supporting your Engagement-CRM platform. With over three years of experience supporting enterprise clients on high-volume, multi-tenant platforms, I have built a strong foundation in L2 troubleshooting, log and API diagnostics, and clear, reproduction-ready escalation—exactly the capabilities this role requires.

Most recently at Taja, I supported enterprise partners integrating payment and identity-verification APIs. I investigated connectivity, webhook delivery, and transaction failures; traced production issues across microservices using structured logs, correlation IDs, and Sentry/Grafana; and reproduced client-reported problems with Postman and cURL. I also prepared reproduction-ready Jira tickets with raw payloads, log snippets, and SQL evidence, which helped engineering resolve issues faster and reduced repeat tickets.

At LocalRamp, I handled L2 requests from 300+ enterprise clients on a multi-tenant platform. I verified user and event states with read-only SQL and internal admin panels, searched logs using user, transaction, and campaign identifiers, and diagnosed API and webhook failures across delivery channels. I authored runbooks and checklists that cut average resolution time from 48 hours to under 12 hours, reduced onboarding time by 40%, and lowered recurring tickets by 25%. I also mentored junior technicians on triage, log searches, and evidence collection, while at Kite I introduced regression testing that cut production bug escapes by over 50%.

I am comfortable working with Jira/Jira Service Management, Kibana/OpenSearch, SQL, REST APIs, Postman, cURL, and browser DevTools, and I enjoy turning recurring issues into clear documentation for L1 teams. I would welcome the opportunity to discuss how my experience can help maintain high service quality for your B2B operators.

Thank you for your time and consideration.

Sincerely,
Iyanuoluwa I. Taiwo
