Dear Hiring Manager,

I am writing to express my interest in the FDE Full-stack Product Engineer role with Inviso. With over three years of experience building and owning enterprise B2B applications across the front end and backend, I am excited by the opportunity to help your client turn complex platform capabilities into usable admin consoles, self-service builder experiences, and customer-facing workflows.

At Taja, I build and ship full-stack features across React/Next.js and Node.js/Express, owning work from the customer problem through production deployment. I design data contracts and integrate platform APIs, optimize data-fetching and service behavior, and build internal tools and monitoring workflows that help teams ship faster and debug production issues. I am comfortable owning the full request path from UI to backend and maintaining quality through automated tests, accessibility, and production support.

At LocalRamp, I led frontend development of a high-volume, PCI-DSS-compliant payments platform used by 300+ enterprise clients. I built a real-time analytics dashboard and an embeddable self-service widget, designed and maintained REST APIs, integrated payment and identity providers with automatic failover, and optimized SQL queries and schemas to improve response times by 20%. I also brought onboarding and payment flows to WCAG 2.2 AA compliance and partnered with UX designers and enterprise clients to validate workflows and iterate on feedback.

More recently, I led frontend architecture for RateLimitr, a full-stack rate-limiting platform, and built an AI-powered natural-language analytics assistant. I designed prompt workflows and evaluated responses against representative tenant queries to improve accuracy. My core stack is TypeScript, React, Node/Express, and SQL, and I ramp quickly on new backend stacks. I have worked directly with enterprise clients and cross-functional teams to reproduce issues, validate workflows, and turn feedback into shipped improvements, and I would welcome the opportunity to bring that ownership-driven, client-facing approach to Inviso's delivery team.

Thank you for your time and consideration.

Sincerely,
Iyanuoluwa I. Taiwo
