Lekki, Lagos

Professional Summary

Backend Engineer with 2 years of experience designing and building scalable, low-latency microservices and distributed systems. Expertise in API architecture, database optimization, event-driven processing, and infrastructure automation for fintech and blockchain applications.

Skills

- **Languages**: Rust, TypeScript, JavaScript, SQL, Python
- **Frameworks**: Fastify, Node.js, Express, Redis, RabbitMQ
- **Databases**: PostgreSQL, MongoDB, TimescaleDB
- **Infrastructure**: Kubernetes, Docker, CI/CD, AWS, Linux
- **Tools**: Git, Sentry, Winston, Bull Queues

Experience

- **Backend Developer, Taja** Lagos
  Nov 2024 - Present
  - **Abuse Detection**: Implemented device fingerprinting and abuse-detection controls to identify impersonation attempts, reducing account takeover incidents by 30%.
  - **Code Review Workflows**: Built monitoring and review workflows that supported code review cadences and mentorship sessions, improving engineering team delivery consistency and code quality.
  - **Query Optimization**: Optimized SQL queries and database indexes to reduce average database request latency by 20%.
  - **Admin Dashboard**: Developed an admin dashboard for internal operations workflows, helping increase organizational productivity by 50% through faster task handling and reporting.
  - **Third-Party Integrations**: Integrated external APIs for payments and identity verification, building provider-agnostic abstraction with automatic failover that routes requests to backup providers when any single service fails, ensuring uninterrupted uptime.
  - **Database Design**: Designed and developed database structures, including schemas and relationships, that improved data integrity and query efficiency across core fintech features.
- **Software Engineer (contract), Kite** Lagos
  Oct 2025 - May 2026
  - **Unified API Layer**: Architected a unified API layer around major payment providers, consolidating complex financial rails into a single high-performance interface used by multiple client applications.
  - **Team Leadership**: Led a team of 2 engineers, defining the technical roadmap, code-review standards, and quarterly planning process while maintaining 99.9% system uptime.
  - **Regression Testing**: Introduced automated regression testing across critical payment flows, cutting production bug escapes by over 50% in the first quarter.
  - **Event-Driven Processing**: Implemented event-driven background processing via RabbitMQ consumers and Bull queues for async email delivery, virtual account creation, and scheduled exchange rate updates.

Projects

- **RateLimitr (TypeScript, Fastify, Redis, TimescaleDB) – 2024**: Distributed rate-limiting service with 4 pluggable algorithms and atomic Redis Lua operations — 10,000+ RPS with zero race conditions across 50+ nodes. Multi-tenant architecture for 10,000+ concurrent tenants with hot-swappable strategies and TimescaleDB-powered real-time analytics.
- **Synapse (TypeScript, Express, MongoDB, Redis)**: Architected a provider-agnostic Strategy/Adapter pattern unifying 3 payment providers behind a single IProviderAdapter interface — enabling hot-swappable provider integration without client code changes. Built a multi-tenant API handling virtual accounts, cards, KYC/KYB, cross-border payouts, and currency swaps across 6+ external financial services with workspace-scoped isolation. Implemented event-driven background processing via RabbitMQ consumers and Bull queues for async email delivery, virtual account creation, and scheduled exchange rate updates. Designed a layered architecture with JWT/API-key auth, rate limiting, structured logging (Winston), Sentry error tracking, and S3-compatible file storage — processing millions in transaction volume.

Education

- **Alex Ekwuememe Federal University, Ebonyi State, Abakaliki** Ebonyi, Nigeria
  Bachelor of Science - Computer Science; GPA: 3.5 *Jan 2021 - Oct 2025*
  Courses: *Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases*
