Dear Hiring Manager,

I am writing to express my interest in the Technical Support Engineer position. With over three years of experience supporting enterprise fintech clients, troubleshooting API and payment issues, and driving integrations to resolution, I am confident I can help your team deliver dependable, developer-friendly support.

Most recently at Taja, I supported enterprise partners integrating payment and identity-verification APIs, diagnosing connectivity and webhook delivery issues and driving them to first resolution. I built provider-agnostic integrations with automatic failover, so when a payment or identity provider fails, requests route seamlessly to backups and live integrations stay up. I also maintained production monitoring, alerting, and incident triage workflows, reducing mean time to detect and resolve client-facing incidents.

At LocalRamp, I provided end-to-end technical support for 300+ active enterprise integrations, troubleshooting API connectivity, webhook delivery, and payment processing issues. I established a structured issue triage and escalation workflow that cut average resolution time from 48 hours to under 12 hours, and I authored API documentation and runbooks that reduced onboarding time by 40% and recurring tickets by 25%. At Kite, I introduced automated regression testing across critical payment flows, cutting production bug escapes by over 50%.

I bring a technical background in TypeScript, Node.js, SQL, and monitoring tools like Sentry and Grafana, paired with a support mindset. I am comfortable debugging transaction data, testing and documenting APIs, and collaborating with engineering, ops, and client teams to turn reported issues into shipped fixes.

I would welcome the opportunity to discuss how my experience can support your team. Thank you for your time and consideration.

Sincerely,
Iyanuoluwa I. Taiwo
